DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

Applicant's amendment filed on 7/19/04 has been fully considered and they are persuasive.

Referring to claim 1, the applicant argues the stopper 48 disclosed in the Randmae reference is not for abutting the protrusions of the imaging element mount, but instead, is for abutting the protrusions of cam follower 42 extending from guide bearing 34. The examiner agrees.

The prior art does not teach or fairly suggest a focus adjustment mechanism for a video or image pickup apparatus comprising: a main frame; a focus adjusting ring; an imaging element mount; a pressing member; a plurality of protrusions on an outer cylindrical portion of said imaging element mount; a rail groove; a plurality of engaging protrusions; cam means located on said focus adjusting ring; a plurality of notches; said engaging protrusions for entering said rail groove via said notches and for engagement with said rail groove; said focus adjusting ring comprising a stopper for abutting the protrusions of said imaging element mount so that rotation of said focus adjusting ring is restricted at a predetermined angular position when said focus adjusting ring rotates in said the opposite direction, and said engaging protrusions are angularly offset from said notches when said focus adjusting ring is held at said predetermined angular position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the
